Art Unit: 2617

DETAILED ACTION

1. This action is in response to applicant's appeal brief filed on July 25, 2006.

Claims 1-5 and 13-17 are still pending in the present application.

2. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-5 and 13-17 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 8 of U.S. Patent No. 6,665,277 B1 in view of Wong et al (U.S. Patent No. 6,233,466 B1).

Art Unit: 2617

Referring to claims 1 and 13, all elements of claims 1 and 13 are disclosed in claims 1 and 8 of U.S. Patent No. 6,665,277 B1.

However, U.S. Patent No. 6,665,277 B1 does not specifically ^{claim} ~~disclose~~ synchronization code over channels during a first symbol time in each of the predetermined number of time slots.

Wong discloses synchronization code over channels during a first symbol time in each of the predetermined number of time slots (figure 3 and col. 6, line 58 through col. 7, line 6, "synchronization codes . . . are transmitted simultaneously during a shorts . . . interval at the beginning of the time slot", "primary synchronization code", "secondary synchronization code").

It would have been obvious to one of the ordinary skill in the art at the time of invention to modify claims 1 and 8 of U.S. Patent No. 6,665,277 B1 by incorporating the teachings of Wong et al, and consequently providing synchronization code over channels during a first symbol time in each of the predetermined number of time slots, so that the decoder would be programmed to look for the synchronization code at the beginning of a time slot and allow the receiver to know the time at which these codes are to be transmitted within the data stream, and consequently identifying the codes embedded within the data.
